

HI-Q™ OPTICAL TEST MEASUREMENT SYSTEM

Using a homodyne methodology, HI-Q™ Optical Test Measurement System (TMS) offers a fully automated measurement of ultra-low phase noise CW laser sources.

HI-Q™ Optical TMS is capable of rapidly measuring laser phase noise and estimating its FWHM linewidth down to < 3 Hz without complex setup or reference lasers normally required to make such a narrow linewidth measurement.

This homodyne based system is unique in wideband measurement without requiring another low noise reference laser source. The complete system operates with ease, speed and precision via a simple graphic user interface on a dedicated PC. No additional test equipment required. The unmatched ultra-low phase/frequency noise analyzer is scalable to various input wavelength bands and is available with low relative intensity noise (RIN) measurement option.
